

# WHAT IS THE INTERNET?

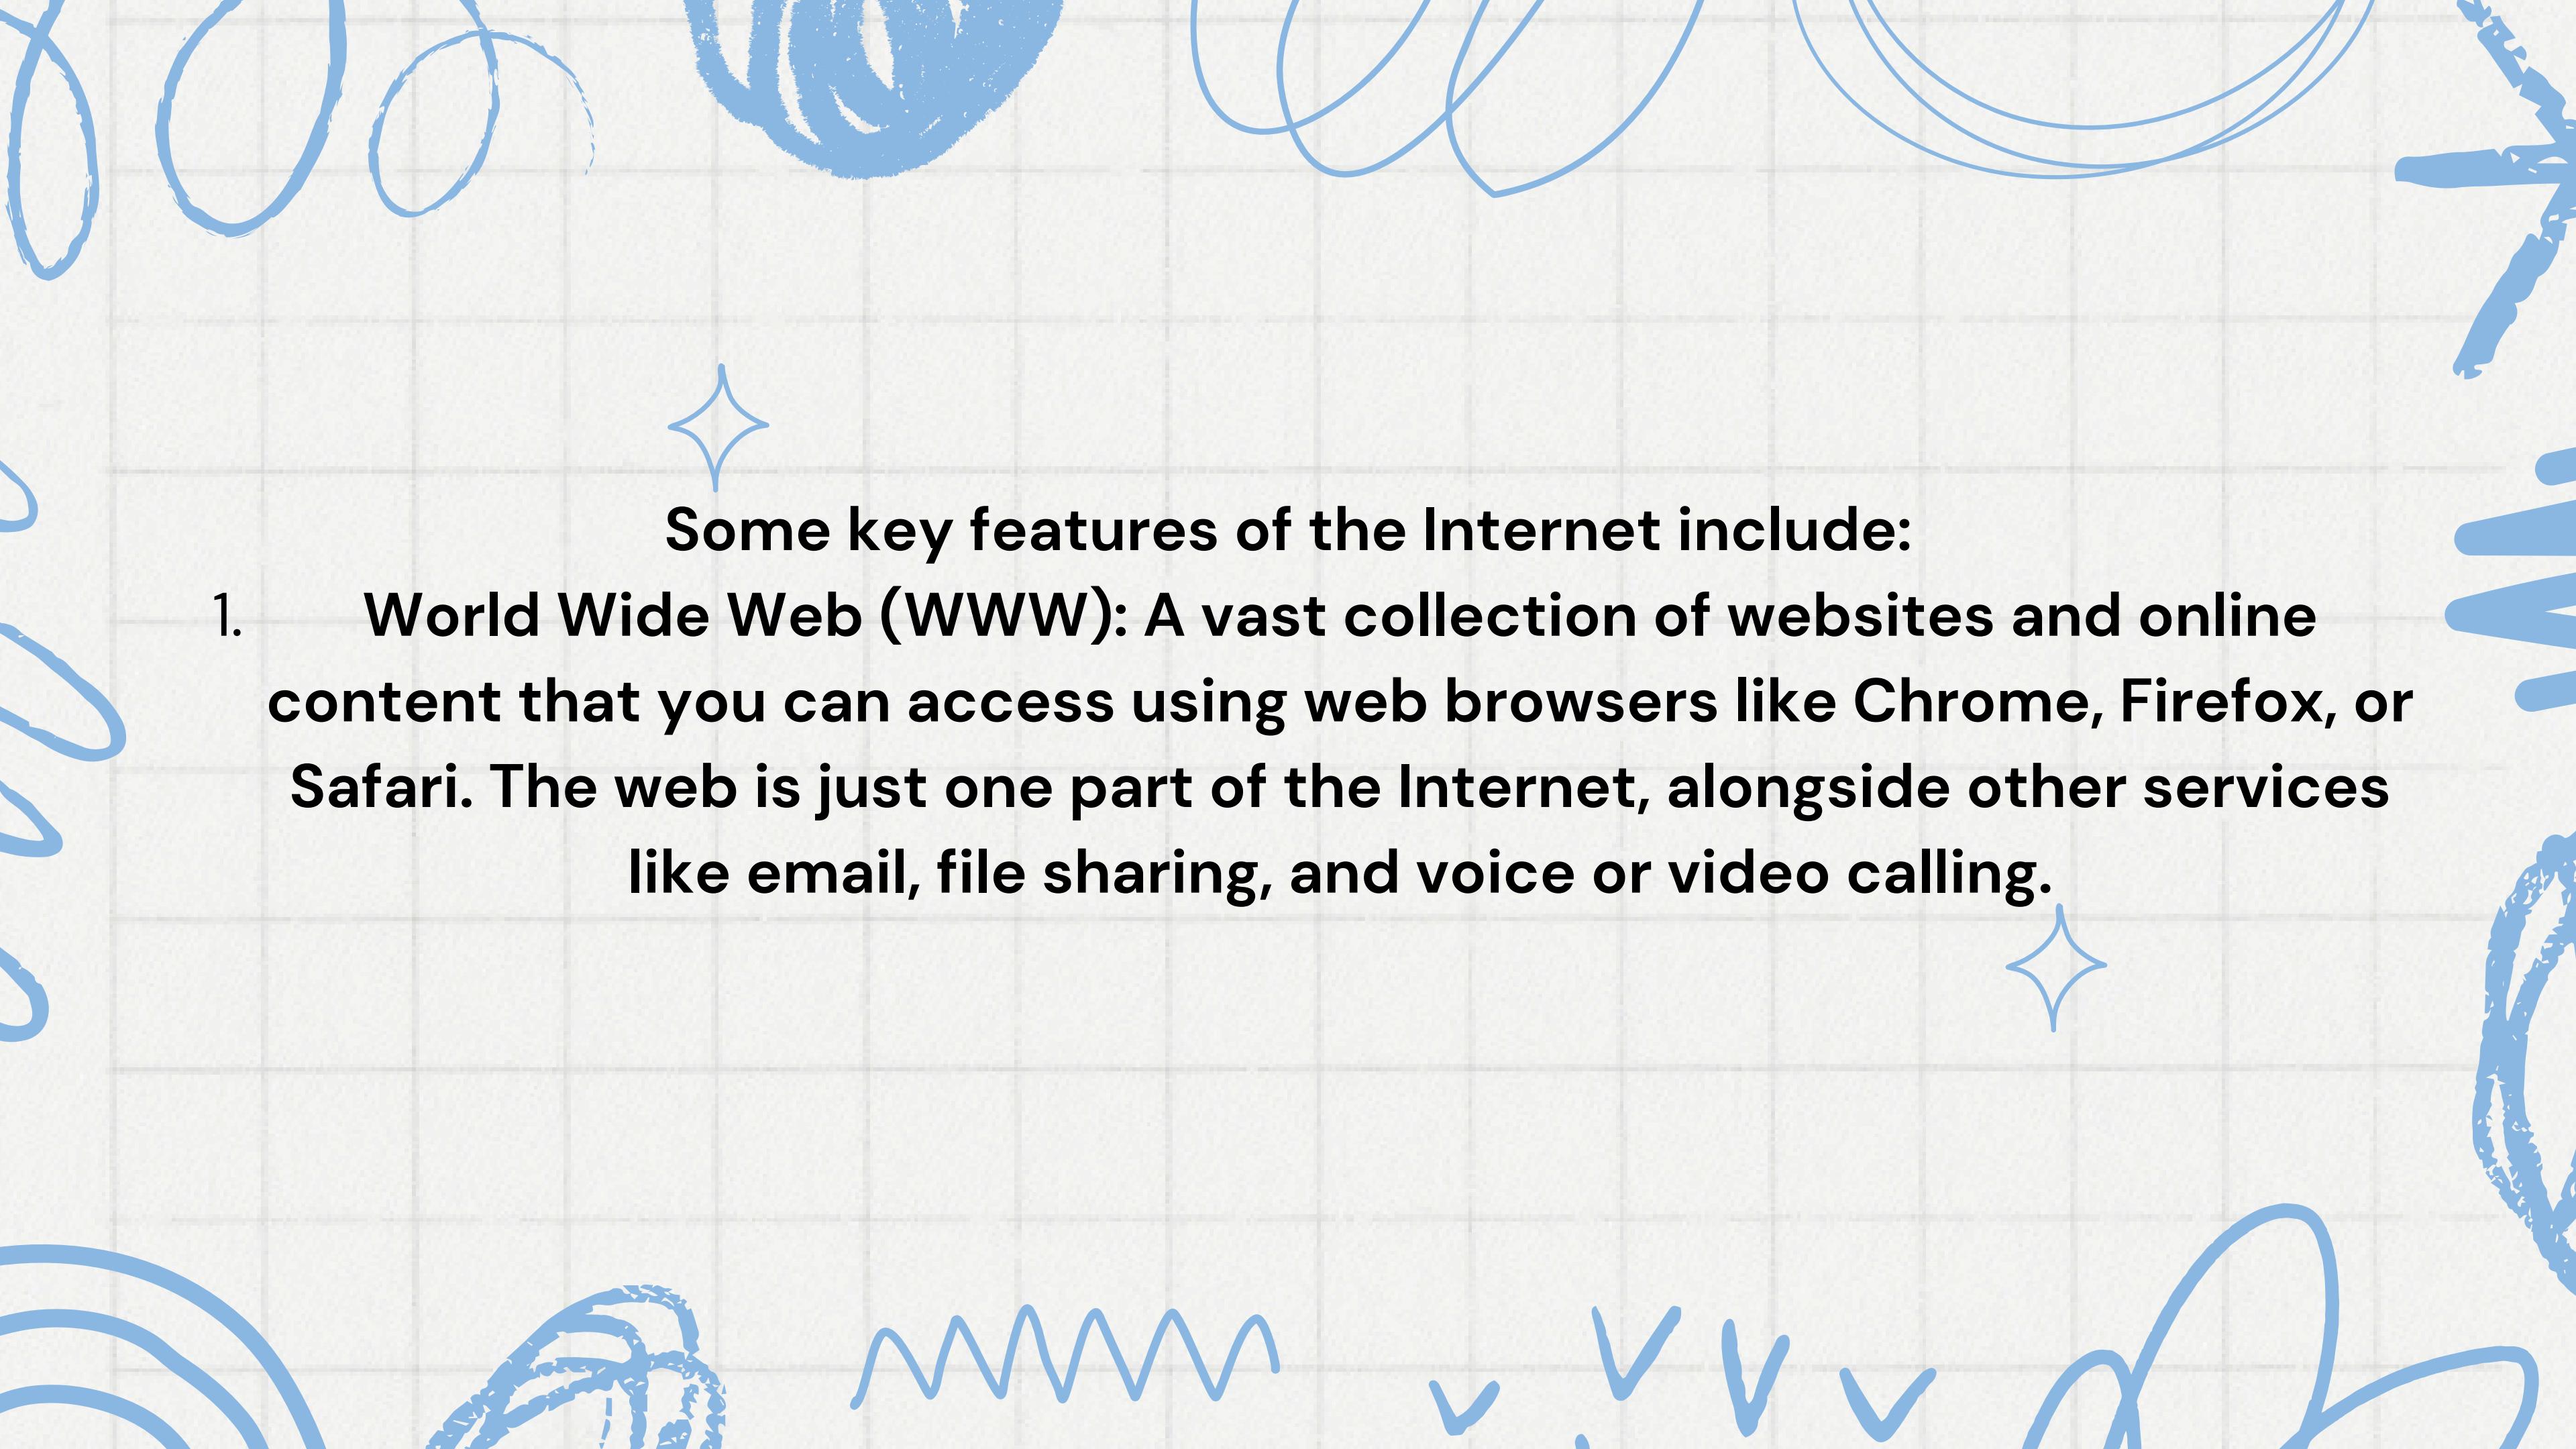

# WHAT IS THE INTERNET?

The Internet is a global network of interconnected computers and devices that communicate with each other to exchange data and information. It allows people to share resources, access websites, communicate via email, participate in social media, stream videos, play online games, and much more.

At its core, the Internet uses a system of protocols called TCP/IP (Transmission Control Protocol/Internet Protocol) to ensure that data is transmitted reliably between devices across vast distances. The Internet is not controlled by any single entity but is a decentralized network made up of millions of smaller networks—ranging from personal home Wi-Fi setups to large corporate and governmental infrastructures.

**Some key features of the Internet include:**

1. **World Wide Web (WWW):** A vast collection of websites and online content that you can access using web browsers like Chrome, Firefox, or Safari. The web is just one part of the Internet, alongside other services like email, file sharing, and voice or video calling.

**2. Email: The Internet allows for**

**electronic mail communication, which  
has become a vital tool for personal  
and professional correspondence.**

**3. Social Media:** Platforms like Facebook, Twitter, Instagram, and TikTok allow users to share content, interact, and connect globally.

**WHAT IS  
WWW?  
(WORLD WIDE  
WEB)**

**The World Wide Web (WWW) is a system of interlinked hypertext documents and media (such as text, images, videos, and audio) that are accessed via the Internet. It is essentially the part of the Internet that most people interact with daily, accessed through web browsers like Google Chrome, Safari, or Firefox.**

**The World Wide Web (WWW) was created by Tim Berners-Lee, a British computer scientist, in 1989. Berners-Lee was working at CERN (the European Organization for Nuclear Research) when he proposed a system to enable researchers to easily share and access documents over the Internet.**

**World Wide Web (WWW) Summary:**  
The World Wide Web (WWW) is a system  
of interlinked web pages and resources  
that are accessed through the Internet  
using web browsers. It allows users to  
view, interact with, and share information  
in the form of text, images, videos, and  
other media.

**Thank you  
very much!**
